10.1 Background

10.1.1 Founding and history

The Cochrane Eyes and Vision Group, US Project was founded in 2002 at Brown University through a 7-year contract from the National Eye Institute (NEI) of the National Institutes of Health (NIH). In May 2010, the NEI awarded the Project an additional 7 years of grant funding. The Cochrane Eyes and Vision Group, US Project was renamed Cochrane Eyes and Vision US Satellite (CEV@US) in 2015. The main aim of CEV@US is to assemble a critical mass of US-based vision researchers who contribute to the generation of comparative effectiveness research. In 2017, the NEI awarded the Project an additional 5 years of grant funding.

In 2005, CEV@US relocated to the Center for Clinical Trials and Evidence Synthesis at the Johns Hopkins Bloomberg School of Public Health in Baltimore, Maryland. In addition to the Principal Investigator, Dr. Kay Dickersin, the CEV@US team includes co-investigators, a project director, methodologists, a number of graduate research assistants with training in epidemiology and biostatistics, and others. CEV@US has an active Advisory Board, with prominent members in eye and vision research fields.

10.1.2 Goals of CEV@US

The objective of CEV@US is to serve as a coordinating center for comparative effectiveness research (CER), specifically CER related to systematic reviews, in eyes and vision in the US. Our goals are to:

- Expand awareness of evidence-based health care in general and in eyes and vision specifically.
- Develop a critical mass of vision researchers who are able to perform and interpret systematic reviews, and train others to do the same.
- Develop a critical mass of clinicians who use the results of systematic reviews as an evidence base to guide their practice, and to train others to do the same.
- Generate an increased number of systematic reviews in priority vision research areas, published in *The Cochrane Library* and in the traditional vision research literature.

10.1.3 Framework

CEV@US conducts systematic reviews for publication in *The Cochrane Library*. Topics for reviews are identified based on gaps from previous reviews and from interest and suggestions of experts in the field. Once a review topic has been identified and approved by the CEV Coordinating Editor, the CEV@US team coordinates the review. This coordination includes overall management using Cochrane's Archie and RevMan review management systems; developing the protocol; creating and executing execution of literature searches; screening articles; abstracting and synthesizing data; drafting the manuscript alongside clinical experts; identifying contact editors and potential peer reviewers; managing the editorial and peer review process; and publishing in *The Cochrane Library*.
